

# Federation for Jira

Use your multiple Jira instances from one driver-seat.

No need to switch to different Jira instances.

No need to migrate.

No need to implement confusing synchronization technologies.

Federation for Jira allows you to **access several Jira instances** in your organization **without having to go through complicated synchronization**.

With Federation for Jira by beecom, you can **streamline all your Jira issues into one cockpit**. Filter and search for your issues from a single centralized Jira server, no matter the Jira instance they belong.

Large enterprises commonly use several Jira instances across their numerous departments. Indeed, it makes sense for tools to reflect complex organizational structures. However, the manual process of switching between separate Jira instances is fiddly and inefficient.

When you need to **take control of multiple or all Jira instances** in your organization, Federation for Jira by beecom is here to help.

## Getting Started

Follow our step-by-step [guide](#) and see how FED can help you use your multiple Jira instances from one driver-seat.

## Resources

Check out the features of the latest version of Federation for Jira, by reading the **release notes**: [Federation for Jira Release Notes](#)

If you want to **install or upgrade** Federation for Jira, read the [Federation for Jira Administrator Guide](#)

If you have already installed the Federation for Jira, read the [Federation for Jira User Guide](#) for information on **how to configure and use** the features of the app.
